### **DETAILED ACTION**

1. The amendment filed on August 15, 2006 has been received and considered. Claims 1-22 and 33-41 are now pending in the application.

#### ***Response to Arguments***

2. Applicant's arguments, see page 1-3, filed August 15, 2006, with respect to the rejection of claim 1 under 35 USC 103(a) have been fully considered and are persuasive. The rejection of claims 1-22 has been withdrawn.
3. Applicant fails to point out any supposed error in the rejection of claims 33-41 under 35 USC 103(a). Therefore, these rejection stand and are addressed below.

#### ***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 33-41 are rejected under 35 U.S.C. 102(b) as being anticipated by Boute, previously cited. Regarding claim 33, Boute discloses a dual chamber pacemaker which automatically optimizes the AV delay, including T wave variation means for measuring T wave variation over a short time duration for each of a plurality of predetermined values of AV delay (see col. 4, ln. 7-17) and optimizing means for determining a predetermined value of AV delay for which the least T wave variation was found, and for setting AV delay as said predetermined value (see blocks 106 and 108 in Figure 6A).

6. Regarding claim 34, Boute discloses that T wave variation means comprises QT means for cyclically obtaining a measure of QT (see col. 4, ln. 7-17).
7. Regarding claim 35, Boute discloses base means for determining base values of AV delay and modulation means for modulation AV delay around each base value (see col. 6, ln. 52-67).
8. Regarding claim 36, Boute discloses at Figure 4B setting the AV delay at each of a plurality of predetermined values for a predetermined time interval and obtaining a measure of QT variation during each predetermined time interval.
9. Regarding claim 37, Boute discloses in Figures 4B, 6A, and 7 different optimization tests to be performed. Therefore, it is inherent that the device of Boute stores a plurality of optimization tests and selects the optimization test to be performed.
10. Regarding claim 38, Boute discloses reprogramming the test following the performed test (see col. 4, ln. 19-23).
11. Regarding claim 39, Boute discloses setting a paced heart rate at which a test is performed (see block 54 in Figure 4B).
12. Regarding claim 40, Boute discloses setting the paced heart rate at about the device LRL (see block 54 in Figure 4B).
13. Regarding claim 41, because Boute discloses generating an AV(r) curve (see block 72 in Figure 4B and AV(r) curve in Figure 2), it is inherent that he sets the paced heart rate at a plurality of rate values.

***Allowable Subject Matter***

14. Claims 1-22 are allowed.

***Conclusion***

15. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

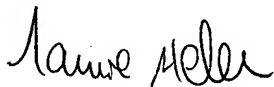

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
